

Project Proposal (22KHDL - Group 03)

Introduction

Health and wellness are important global topics. Especially in Vietnam, where users care about their needs.

Understanding the importance of providing accurate and transparent drug information, our team decided to collect data from Long Chau Pharmacy, one of Vietnam's most reputable and popular pharmacy chains. Through collecting and analyzing data from this pharmacy's website, we hope to help users easily look up and choose medicinal products that suit their needs, while ensuring safety. Complete and reasonable price. The data we collect is taken from the source: nhathuoclongchau.com.vn

In business field, these data can provide valuable insights into market trends, pricing strategies, and consumer preferences, allowing them to optimize offerings, enhance their customer satisfaction, and stay competitive in the pharmaceutical industry.

Attributes

Possible attribute when analyzing the product (for Functional food, medical equipment, cosmetic medicine, and personal care)

- | | |
|-------------------|---------------------|
| - Name/Attributes | - Brand origin |
| - Trademark | - Country of origin |
| - Category | - Dosage form |
| - Selling price | - Rating |

So when we collect data from the website, we will have a table like this with these attributes.

Name/Attributes	Trademark	Category	Price	Brand origin	Country of origin	Dosage form	Rating
-----------------	-----------	----------	-------	--------------	-------------------	-------------	--------

Questions

For questions that can be used after the data have been obtained:

1. With the same product function, how will the brand of Vietnamese
 - i. What is the average price range of medical products across different categories?
2. For a medical product, what factors will people rely on when buying?
3. What are the top-selling medical products over the past six months?
4. How do promotions and discounts affect the sales of medical products?
5. For users, what is the keyword that people search for the most every 6 months?
6. Which (categories/brand/...) of medical products have the highest customer (rating/ number of products sold,...)?

Plan

No.	Task	Estimated Time	Expected Outcome
1	Identify the topic	3 days	- The topic that group will work on. - Data sources for web scraping. - Identification of expected outcomes.
2	Develop implementation plan	1 day	- Detailed implementation plan.
3	Write the proposal	1 - 2 days	- Proposal document.
4	Data science process	5 - 5.5 weeks	- Raw formatted dataset.
			- Clean dataset. - New features may be generated from raw data.
			- Visualization report. - Identification of trends and relationships between variables. - The clear understanding of data structure and distribution.
			- One or more models. - Performance comparison table with strengths and weaknesses of each model.
5	Presentation	1-2 days	- The final version of the presentation
6	Summary	1-2 days	- Final files (Jupyter notebooks, slides, data) for the final project.
